ABOUT VFL 2019

1.1 Overview of the global project

Views from the frontline (VFL) 2019 is the largest independent global review of Disaster Risk reduction at the local level. It aims to strengthen the inclusion and collaboration between at risk people, civil society and government in the design and implementation of policies and practices to reduce risks and strengthen resilience.

VFL 2019 establishes a local baseline and local monitoring process to measure progress towards achieving an inclusive “*people-centred*” approach to resilience-building, as promoted within the Sendai Framework for Disaster Risk Reduction (SFDRR) and other frameworks part of the Agenda 2030. In so doing, VFL 2019 aims to increase awareness and strengthen accountability of governments and inter-governmental bodies for a people-centred approach. VFL 2019 takes a *systems-wide* perspective that recognizes different actors have different but interconnected responsibilities at different administrative levels. Local-level interviews are complemented by survey questions targeting key informants working on the sub-national/national institutional and political environment. Questions on the “*enabling environment*” are designed to increase awareness and assess progress on wider institutional factors essential to scale out local action, putting a political spotlight on gaps and challenges to be addressed in through mutually-reinforcing actions by different actors at different scales. The whole process is led by local actors themselves, building their capacity to monitor and utilize local risk information.

1.2 Overview of VFL 2019 in Rwanda

Views from the frontline (VFL) 2019 Project in Rwanda was designed to contribute to the implementation of Sustainable development Goals (SDGs) through the process of including the vulnerable groups in risks assessments, providing local action planning technical support and seed funds to implement resilience-building actions, providing evidence to inform the design of

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

more effective climate adaption and poverty alleviation, and building the capacity to civil society organizations to take part in resilience processes. It contributes to the monitoring of these goals providing local data on different disaster risks. It was conducted in three Rwanda districts, within fifteen communities.

2. COUNTRY'S GENERAL CONTEXT

Rwanda is hilly and highly prone to disasters, landlocked and densely populated country with serious problems related to land scarcity.

Geographically, Rwanda is situated East of Central Africa between 10°04" and 20°51" latitude south and between 28°53" and 30°53" longitude East.

2.1. Socio-demographic Data

Rwanda has an area of 26,338 km². Using the 2019 population of 12.63 million people, the population density of Rwanda is 1242.0 people per square mile (479.5 people per square kilometer), which ranks 14th worldwide with a natural growth rate of 3.1% (MINISTRY OF ECONOMICS AND FINANCES, Oct 2018). Rwanda is the most densely populated African country, and its annual income per capita of about US\$210 (2000 estimates) makes it one of the poorest countries in Africa.

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

2.2. Physical Data

2.2.1 Relief

Rwanda is a very hilly country, with steep slopes ravaged by massive and devastating soil erosion which is exacerbated by over stripping of land, deforestation, and inadequate use of land improvement techniques. The country has an altitude of between 900 m and 4,500 m. Rwanda relief has earned the nickname of the “Land of a Thousand Hills”.

2.2.2 Climate

With more or less constant temperatures throughout the year (16 – 17 °C in the high altitudes, 18 °C – 21 °C in the central plateau and 20°C – 24°C in the eastern and western lowlands), Rwanda has an equatorial-continentale temperate type of climate classified as AW3, according to the

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

Köppen classification. The country has four seasons which are determined by the variability of rainfall. However, the rainfall is quite irregular and gives rise to prolonged drought periods, especially in the regions of Bugesera, Mayaga and Umutara, causing serious setbacks to agricultural activities that are totally dependent on rainfall.

2.3 Economic and socio-cultural data

Rwanda economy is based mainly on Agriculture. In fact, this sector occupies 91.1% of the active population and produces 43.5% of GDP and 80% of the country's exports, principally from coffee and tea (MINISTRY OF AGRICULTURE, 1998). Land resource is, therefore, the most important factor of production and survival for the nation and the entire population, and it will remain the backbone of the national economy for a long time to come.

However, due to its scarcity, land as a natural resource does not offer many alternatives in terms of increased arable land. In fact, agricultural land is estimated at around 1,380,000 ha, which is about 52% of the country's surface area. Together with the reclaimed part of the Akagera National Park, i.e. a surface area of 194,000 ha, and the entire Umutara Game Reserve, around 15,000 ha, for agriculture, livestock and forestry, the total surface area of arable land comes to 1,589,000 ha, or 60% of the national territory; Marshland area is estimated at around 165.000 hectares.

3. VFL 2019 AND ITS IMPLEMENTATION IN RWANDA.

The implementation of VFL 2019 project was undertaken in three main steps such as Preparation, Data collection, Analysis and use of findings phases:

3.1. Preparation phase

This phase includes the selection of National Advisory Committee who are experts from different humanitarian backgrounds and project management specialists to advice on VFL2019 good implementation, the selection of survey sample and Partners organizations, and training of partner organization. The selection process for POS was based on legal status, the capacity of the Partner Organizations looking at their past performances and recommendations from different sponsors, their capacity to submit the necessary documents on time, their past experience in managing the community projects, their working plan and budget explanations, their trust and connections with the selected communities.

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

3.2. Data collection

This phase aimed to conduct structured conversations to systematically gather local actor's perspectives so as to direct local actors in a risk assessment and inform more effective resilience-building. After confirming communities, Partner Organizations coordinated with village authorities and local civil society organizations for the selection of respondents and face-to-face surveys were scheduled. VFL2019- related information materials have been provided to the village authorities and civil society organizations. Furthermore, enumerators and facilitators started the survey.

Data collection was done through Random Household, Community Consultations

(Focus group),Civil society and Local Government surveys according to the questionnaires.

Analysis and use of Findings

4. VFL 2019 IS RELEVANT TO BUILDING RESILIENCE IN RWANDA

View from the frontline (VFL2019) will contribute to the implementation and monitoring of Sendai Framework for Disaster risk Reduction specifically in its priorities 1,2,3, 4 which are: Understand disaster risk, Strengthening disaster risk governance to manage disaster risk, Investing in disaster risk reduction for resilience, Enhancing disaster preparedness for effective response and to build back better in recovery, rehabilitation and reconstruction, and other Processes, Agreements, Conventions such as: Paris Agreement, Humanitarian Agenda will provide useful information on disaster risks from the case studies, best practices. This will help the development of local resilience planning processes. In another hand, VFL processes will strengthen the inclusion and collaboration between at-risk people, civil society and governments in the design and implementation of policies and practices to reduce risks and strengthen resilience in Rwanda, By the local action plans VFL2019 will ensure best actions and practices that contribute to community resilience by engaging and measuring the achievements and the targets of global frameworks and also identify critical gaps that need to be addressed.

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

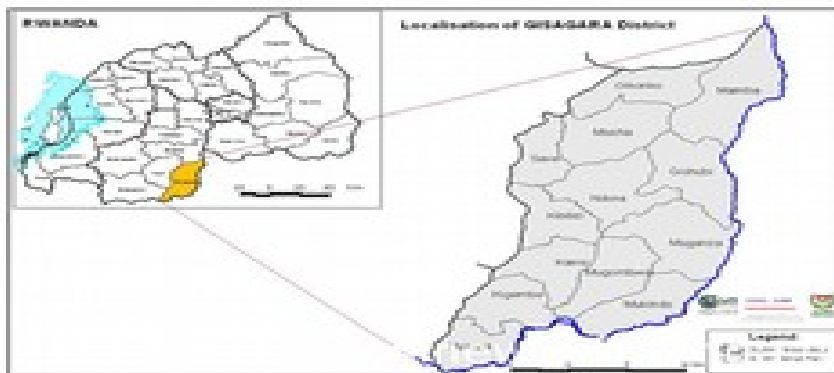

5. SELECTION OF RISK AREAS, COMMUNITIES AND SAMPLE SIZE

5.1 Brief Details on the Selected Risk Areas:

5.1.1 Factors used to select the risk area:

The survey took areas located in the most vulnerable parts of the country, and they represent different multi-hazards environments of Rwanda. The **identification of an administrative level** to be an 'area' was done depending considering a potential region/district that has more than 10 areas, this was carried out by **vulnerability map** where areas with more vulnerabilities criteria were taken into account. Thereafter, the **hazard map** was done to identify hazards which were assessed each area.

5.2 Brief Details about the Selected Communities:

Gisagara district

selected area

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

Gakenke district selected area

Gasabo district

selected area

5.2.1 Factors used for rural and urban communities' selection:

Using the National risk Atlas of Rwanda, Vulnerability and hazard map of Rwanda the NAC has selected 15 communities in three districts and also have taken account of the factors below:

- Be a balance of urban and rural,
- Have high poverty level
- Be where you and Partners Organisations have established trust and connections
- Be a balance where there have been previous Disaster Risk Reduction interventions and where there have been less interventions
- Be balanced where there are active and inactive governments

The NAC selected these community under the guidance of the VFL2019 implementation handbook and given the experience from past projects performance and also knowledge of local context.

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

5.3 Total Sample Size identification:

This part includes the selection of survey sample, where three risk areas are selected, depending on Rwanda country size and its risk profile. Within these areas, 15 communities were chosen: seven are urban and eight are rural.

In each community:

- I. A random sample of households has been taken depending to the population size and the budget
 - II. Ten local government representatives have been interviewed
 - III. Ten Civil society organizations have been interviewed
 - IV. Five group discussions have been held
- State the numbers of Random Households (RHS), Civil Society (CS), Local Government (LG) and Community Consultation (CC) per risk area and communities are presented in the table below:

Risk Areas	Communities	Urban/Rural	Partner Organisation	Sample Size			
				RHS	LG	CS	CC
Gakenke	Kageyo	Urban	Igire Rwanda Organisation	75	10	10	5
	Kabaya	Urban		75	10	10	5

5. FINDINGS AND CONCLUSIONS AT THE COMMUNITY AND NATIONAL LEVEL

Risk Areas	Communities	Findings	Conclusion
Gasabo district	Muhozi	<p>In this community 11 local government survey, 12 civil society representatives and 149CC was conducted by and respondents stressed that major threats are:</p> <p>Finding 1: Droughts have been stressed by Local government authorities as the main threat</p> <p>Finding 2: Almost 50% of respondents have lived there for more than 10 years and Heavy rainfall and Erosion being major threats</p> <p>Finding 3: Civil society interviewed 60% acknowledge famine and food insecurity as the main threat in the area</p> <p>Finding 4: Consultations held with community members show that environmental effects caused heavy rainfall</p>	<ul style="list-style-type: none"> - There is differences in perception of respondents in matters related to the threats - Half said threats have decreased other said they have remained the same barriers being; dependency, government instability, disparity in wealth and income - There is lack of ecosystem management and restoration, lack of drainage channels - There is lack of government commitment to emphasize the environment measures and raising awareness

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		which lead to displacements and impoverishment	
	Ramba	<p>12 civil society members, 11 local government representatives and 174 community members have been interviewed</p> <p>Finding 1: More than 12% of respondents have stated that despite awareness and advocacy still the early pregnancy is a problem</p> <p>Finding 2: members of community have stated that dependency and orphans' have led to early pregnancy and prostitution despite education</p> <p>Finding 3: More than 25% of respondents stated that heavy rainfall and droughts are the main threats face this community</p> <p>Finding 4: Over 40% Respondents stated they have lived there for more than ten years and the disasters have remained the same but sometimes decreased a little bit</p>	<ul style="list-style-type: none"> - There is lack of actions to reduce poverty and employment but also awareness raising education and training - There is lack of social protection especially children but also attitudinal issues - There is lack of education about climate change adaptation, lack of drainage channels and lack of mobilization to members of this community for not living in high risk zones - There is lack of stakeholders engagement to reach this community and talk about climate change issues and cope with changes - There is lack of government

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		<p>Finding 5: Respondents stated that landslides and erosion are repetitive and caused building destruction</p>	<p>policy to prohibit people building in highly slopped geographical areas</p>
	Karama	<p>The interviewers reached 13 CSOs, 13 local government representatives and held 114 community members respondents</p> <p>Finding 1: Almost 30% of Respondents stated that they have faced famine resulting from droughts and this has also led to the environmental impact</p> <p>Finding 2: 24% of respondents stated that erosion have caused losses and building destructions</p> <p>Finding 3: CSos and Governmental representatives agreed that the threats have been remained the same over the past 5years such as droughts/famine however there are actions to reduce poverty and education</p>	<ul style="list-style-type: none"> - There is a lot of deforestation but also surveyors remarked extreme poverty in this area - There is poor natural resource management high migration level which cause poverty because of displacement and lack of education - There is a need to include community in the processes of risks and development plans but also a need to change the attitudinal issues

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		<p>Finding 4: Respondent also stated that there is conflict which has led to disabilities , displacements, and hopelessness about 33.3%, 33.3%, 33.3% respectively</p> <p>Finding 5: 5% of this community are alcoholic and 80% have lived in this community for more than 5 years and feel integrated and sometimes the government intervene but threats remains</p>	<ul style="list-style-type: none"> - There is lack of coordination between institutions and different stakeholders but also psychological intervention - There is lack of change in attitudinal issues but also government programs to educate them become inclusive in the development processes
Rubungo		<p>Interviewers have reached have reached 14 Local government representatives, 9 CSOs representatives and 202 community members</p> <p>Finding 1: 32% of CSOs and local government representatives emphasized droughts as major threat to this community while community members prioritized heavy rainfall</p> <p>Finding 2: 29% stated that heavy rain have caused crop damage</p>	<ul style="list-style-type: none"> - There is difference between perception of CSOs, government representatives and communities - There is a need for disaster preparedness and contingency - planning

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		<p>although there was advocacy</p> <p>Finding 3: 22% of respondents tackled erosion which caused crop damage at 31% however there were no measures to prevent this</p> <p>Finding 4: 6.67% of respondents stated food insecurity and 11,11%infrastructure damage</p> <p>Finding 5: 4.5% respondents pointed out early pregnancy as a result of alcoholism, family problems and poverty</p>	<ul style="list-style-type: none"> - There is a lack of behaviour change amongst community to prevent this threat - There is lack of contingency planning for long time to prevent this because they are routine - There is lack of health promotion and lack of policies
	Kayumba	<p>10 local government representatives,11 CSOs,113 community members have been consulted</p> <p>Finding 1: 37% of civil society respondents stated that heavy rainfall is major threat to this community while 32% of local government representatives stated erosion and 27% of community respondent emphasized on heavy rainfall as the main threat</p>	<ul style="list-style-type: none"> - There is a common perception of the these respondents about the threats faces this community therefore the government lacks integrated development plans with reduction of risk measures to adapt to climate change

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		<p>Finding 2: 18.52% of respondents from community members revealed environmental effects</p> <p>Finding 3: 3% of women revealed corruption which led to loss of basic services</p> <p>Finding 4: 85% or household respondent have lived in this community between 5 and 10 years and more, the threats have been remained the same and in some case reduced a little</p>	<ul style="list-style-type: none"> - There is lack of government policy regarding environment protection and restoration - There is lack of measures to protect vulnerable groups but also personal actions - There is a need to change the attitudinal issues and strengthen community capacities to participate in risk reduction processes
Gisagara District	Taba	<p>The questionnaire was responded by 10 LG, 12 CSOs, 114 CC representatives</p> <p>Finding 1: Civil society, community members and local government prioritized drought as the main threat to this community</p> <p>Finding 2: Community members stressed that they are facing hunger and food insecurity every year</p> <p>Finding 3: More than 60% of households</p>	<ul style="list-style-type: none"> - There is lack of early warning systems to deal with this threat and avoid hunger - There is lack of coordination include government to put contingency plans and measures to overcome this hunger - There is a need of ecosystem management and restoration

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

		<p>interviewed stated that threats have increased</p> <p>Finding 4: Over 6% of the respondents are drug addicted which cause increase in prostitution and hopelessness</p> <p>Finding 5: More than 6% of crop have been damaged</p>	<ul style="list-style-type: none"> - There is lack of child protection and committee establishment - There is lack of distribution of emergency equipments and stock management
	Lwakabuye	<p>Questionnaire distributed and responded by 12 LG, 10 CSOs, 114 CC</p> <p>Finding 1: More than 53% of respondents pointed out droughts s the major threat to this community</p> <p>Finding 2: 4.2% of respondents stated that there is corruption in this community although there is government policy</p> <p>Finding 3: About 3% of respondents reported disease and epidemics</p> <p>Finding 4: Households interviewed pointed out there is a loss of clean water sources</p> <p>Finding 5: This</p>	<ul style="list-style-type: none"> - There is lack of early warning systems to deal with this threat and avoid hunger - There is no reporting mechanisms and protection of reporters - There is lack of first aid kits, children protection and committee establishment and contingency planning - There are problems of irrigation and training of community members about natural resources management and community self empowerment

5.2 Draw out findings and conclusions at the National level

Findings	Conclusion
<p>The surveys was conducted in three districts and 5 communities in each which means 15 communities in total have been reached</p> <p>Finding 1: 161 CSOs, 184 LG, 130 CC and 1289 Random household representatives have been interviewed and heard in these communities to collect their perceptions on threats faced by local citizens; more than 25% of respondents stated droughts, floods, heavy rainfall, erosion, landslides, crop damages as the main threats to the communities factors being different whether man made or natural</p>	<ul style="list-style-type: none"> - There were some contradictions between some of the respondents specifically local communities and government regarding their inclusion in plans and decision making

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

<p>Finding 2: 36.21% of the respondents stated threats have been increased in the last 10 years and 26.85% stated the threats remained the same over the last ten years</p>	<ul style="list-style-type: none"> - There is no clear plans and activities designed to reduce risks of threats and also there is lack of stakeholders coordination to inclusively implement policies and plans at local level
<p>Finding 3: 9.7% of the respondents fear floods and 8.95% fear unemployment for future generations factors being, limited early warning systems, debts and government instability</p>	<ul style="list-style-type: none"> - There is lack of confidence towards the policies and strategies in place but also their implementation at local level

5.2.1. Quote of the National Advisory Committee members/on the VFL process and the national finding

“We need Coordination with government and different stakeholders to tackle every source of disaster and also the disaster education across the country” stated by Muvara Gahima Vincent a member of National Advisory Committee to VFL2019 who is also a National University of Rwanda Lecturer

“There is need of Early warning systems to put in place by government in collaboration with stakeholders to help communities get notified in case of possible hazards” stated by Mwizerwa Eric a member of National Advisory Committee and work at the Ministry of Emergency Management

a. Prioritised conclusion at the Community level

- There were some different perceptions between some of the respondents specifically local communities and government regarding their inclusion in plans and decision making
- There is no clear plans and activities designed to reduce risks of threats and also there is lack of stakeholders coordination to inclusively implement policies and plans at local level
- There are too much hopelessness especially from young people considering very high population growth and non investment infrastructure for drr

b. Prioritised conclusion at the National level

- There is lack of mitigation strategies and involvement of communities in all stages of planning for disaster reduction
- There is lack of CSO s, Government and INGOs to effectively engage the vulnerable communities to review and assess the most vulnerable threats, strengthen the capacity of communities to help them participate in resilience processes

Disaster risk reduction and

preparedness

Tel: +250 788 301 603, Email:manadisa16@hotmail.fr, Office 15 ATC house

- There is need for DRR stakeholders be tasked to engage the vulnerable communities in assessing the most significant threats, planning of actions, implementation of actions to reduce risks and monitoring progress towards resilience.
- There is lack of Building partnerships that work to ensure coherence between strategies to reduce risks adaptation to climate change.

These conclusions are made following the findings highlighted above

#2 Formation Process of National Advisory Committee

(a. The NCO has approached different stakeholders who have different backgrounds in matters related to disaster assessment and academia) The objectives of NAC was to help the project achieve effective results such that they are able to exemplify the results at national level and help bridge the gaps between policies and practices.

#3 List the members of the NAC

- a.1. **Ndacyayisaba Noella** is a member of civil society platform and she has contributed to the selection of competent POs
2. **Patric Mugisha** is an expert and disaster management specialist in Rwanda Red Cross he shared to the NAC his experience in disaster training courses and collaborations at national level on where to inject VFL findings and results.
3. **Murungi Angelique** is a director of disaster management department in Rwanda Red Cross and has done a lot of trainings in disaster related issues. She shared with NAC the disaster mapping in Rwanda.
4. **Muvara Gahima Vincent** is currently a lecturer at National University of Rwanda and he has shared with NAC the disaster papers and literature review for the guidance to the NCO
5. **Nsabimana Christophe** is currently a civil engineer by profession and he has designed and supervised the reconstruction of more refugees camp projects and houses constructed for people who live in high risk zones in Rwanda. He shared knowledge to the NAC where to focus when mapping the survey areas and the approaches

6. **Nikuze Susane** is member of civil society organizations movement for climate change and she shared with NAC her experience in climate related issues and her general background in working with communities.
7. **Abamariya Marie Claire** is a local government leader who work directly with communities dairy she gave advices to the NAC on how to collaborate with communities and ensure their safety and their participation.
8. **Uwitonze Jean Pierre** is a project specialist he shared he is knowledge in project management for the project to be successful and achieve its results effectively.
9. **Ngezahimana Jean Bosco** is a statistics special analyst at National Institute of Statistics of Rwanda and he contributed to the NAC his experience in surveys and other statistical tools and materials. As he has worked in different projects funded by European Union
10. **Mwizere Rukundo Eric** is a government official in the Ministry in charge of Emergency Management he has acquired a huge knowledge in disaster related issues in the whole country of Rwanda as he is working countrywide he gave the advice advices on where, who to contact, who will be respondents and pledged national collaboration to use the findings

The NAC Committee is composed of 7 men and 4 women

No	Names	Sex
1	Ndacyayisaba Noella	Female
2	Patric Mugisha	Male
3	Murungi Angelique	Female
4	Muvara Gahima Vincent	Male
5	Nsabimana Christophe	Male
6	Nikuze Suzane	Female
7	Abamaliya Marie Claire	Female
8	Uwitonze Jean Pierre	Male
9	Ngezahimana Jean Bosco	Male
